ENERGY, CAPITALISM AND WORLD ORDER

ECONOFICTION ACCUMULATION, CAPITAL, CLIMATE CHANGE, ENERGY, FOSSIL CAPITAL, MARXISM

In sum, the last three centuries of an emergent and transforming global political economy must not be viewed teleologically – as in a linear or stadial developmentalism where some desired end is finally achieved – but as a historical exception shaped by the power of capital and fossil fuel energy. This pattern of development is running up against profound challenges and obstacles that may threaten a general crisis of social reproduction –a situation where current forms of life and lifestyles cannot be reproduced in to the future.
